SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	04/16/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

## Office Action Summary

Application No.

09/912,389

Applicant(s)

COWIE ET AL.

Examiner

Matthew T. Henning

Art Unit

2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 17 January 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) See Continuation Sheet is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) See Continuation Sheet is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 October 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Notice of Informal Patent Application
- ☐ Other: \_\_\_\_\_

1 This action is in response to the communication filed on 1/17/2007.

2 **DETAILED ACTION**

3 *Continued Examination Under 37 CFR 1.114*

4  
5 A request for continued examination under 37 CFR 1.114, including the fee set forth in  
6 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is  
7 eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e)  
8 has been timely paid, the finality of the previous Office action has been withdrawn pursuant to  
9 37 CFR 1.114. Applicant's submission filed on 1/17/2007 has been entered.

10 *Response to Arguments*

11 Applicants' arguments filed 1/17/2007 have been fully considered but are moot in view  
12 of the new grounds of rejection presented below.

13 Claims 1-3, 5-8, 12, 14-19, 21-24, 28, 30-35, 37-40, 44, 46-51, 53-56, 60, 62-67, 69-72,  
14 76, 78-83, 85-88, 92, 94-96, and 98 have been examined, while claims 4, 9-11, 13, 20, 25-27, 29,  
15 36, 41-43, 45, 52, 57-59, 61, 68, 73-75, 77, 84, 89-91, 93, and 97 have been cancelled.

16 All objections and rejections not set forth below have been withdrawn.

17 Any claim not specifically mentioned above has been rejected by virtue of its dependency  
18 to a specifically mentioned claim.

19

20

21

22

Art Unit: 2131

**Claim Objections**

Claim 3 is objected to because of the following informalities:

Line 2 recites "said resource data of said packed computer file comparing logic" which lacks antecedent basis in the claim language. The examiner will assume that this was meant to read "said resource data comparing logic" as is consistent with claim 1.

Line 3 recites "said resource data" which has multiple antecedent basis in the claim. It is unclear to which resource data this is referring and therefore the ordinary person skilled in the art would not be able to determine the scope of the claim. For purposes of searching prior art, the examiner will assume that the limitation was meant to read "said resource data of said packed computer file" as is consistent with the rest of the claims.

Appropriate correction is required.

**Claim Rejections - 35 USC § 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

*A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.*

Claims 1-3, 5-8, 12, 14-19, 21-24, 28, 30-35, 37-40, 44, 46-51, 53-56, 60, 62-67, 69-72, 76, 78-83, 85-88, 92, 94-96, and 98 are rejected under 35 U.S.C. 103(a) as being unpatentable

Art Unit: 2131

1 over Cozza (US Patent Number 5,649,095), and further in view of Arnold et al. (US Patent  
2 Number 5,442,699), hereinafter referred to as Arnold, and further in view of Pietrek ("Peering  
3 Inside the PE: A Tour of the Win 32 Portable Executable").

4       Regarding claims 1, 17, 33, 49, 65, and 81, Cozza disclosed a system, method, and  
5 computer program product in a computer storage medium (See Cozza Claims and Col. 1 Lines  
6 26-33) comprising a computer program operable to control a computer to detect a known  
7 computer program within a packed computer file, said packed computer file being unpacked  
8 upon execution, said computer program comprising (See Cozza Abstract and Col. 3 Paragraph  
9 6): resource data reading logic for reading resource data within said packed computer file (See  
10 Cozza Col. 6 Lines 21-23 and 29-34), said resource data specifying program resource items used  
11 by said known computer program (See Cozza Col. 2 Paragraph 7) and readable by a computer  
12 operating system without dependence upon which unpacking algorithm is used by said packed  
13 computer file (See Cozza Col. 6 Paragraphs 2-3 wherein the compressed file is not decompressed  
14 in order to read the resource forks information); and resource data comparing logic for  
15 generating characteristics of said resource data (See Cozza Col. 1 Lines 58-65 wherein it was  
16 inherent that the characteristic data was generated in order for the data to have been compared)  
17 and for comparing said characteristics of said resource data with characteristics of resource data  
18 of said known computer program (See Cozza Col. 7 Lines 35-39 and Col. 1 Lines 58-65) and for  
19 detecting a match with said known computer program indicative of said packed computer file  
20 containing said known computer program (See Cozza Col. 7 Lines 35-39 and Col. 1 Lines 58-  
21 65), wherein said resource data of said packed computer file is processed to generate fingerprint  
22 data (See Cozza Fig. 5); wherein said generated fingerprint data includes a number of program

1 resource items specified within said resource data of said packed computer file (See Cozza Fig. 5  
2 RESFORKLEN); wherein said generated fingerprint data includes a flag indicating which data is  
3 included within said generated fingerprint data (See Cozza Fig. 5); wherein the fingerprint data  
4 includes a location within said resource data of an entry specifying a program resource item  
5 having a largest size (See Cozza Col. 6 Lines 29-45); wherein said generated fingerprint data  
6 includes a checksum value of the computer file (See Cozza Fig. 5), but Cozza failed to disclose  
7 wherein said generated fingerprint data is compared with fingerprint data of said known  
8 computer program; or that the checksum value was calculated in dependence upon: a number of  
9 said program resource items specified beneath each node within hierarchically arranged resource  
10 data of said packed computer file; string names associated with said program resource items  
11 within said resource data of said packed computer file; and sizes of said program resource items  
12 within said resource data of said packed computer file. However, Cozza did disclose the file  
13 including a number of program resource items specified within said resource data (See Cozza  
14 Col. 2 Paragraph 7).

15 Pietrek teaches that a Win32 PE file is an executable file which contains un-initialized  
16 code and resources, which when executed the code is initialized using the resources (See Pietrek  
17 Page 21 PE File Base Relocations).

18 Arnold teaches a method of virus scanning in which hashes of a file are created and  
19 compared to hashes of known viral patterns in order to detect computer viruses upon matching  
20 (See Arnold Col. 10 Lines 48-52).

21 It would have been obvious to the ordinary person skilled in the art at the time of  
22 invention to employ the teachings of Pietrek in the virus detector of Cozza by allowing the

Art Unit: 2131

1 scanning of Win32 PE files and their resources. This would have been obvious because the  
2 ordinary person skilled in the art would have been motivated to provide protection against Win32  
3 PE files containing viruses.

4 It further would have been obvious to the ordinary person skilled in the art at the time of  
5 invention to employ the teachings of Arnold in the virus scanning of Cozza by creating hashes of  
6 the data, including the resources, of the compressed file and comparing it to hashes of known  
7 viral patterns. This would have been obvious because the ordinary person skilled in the art  
8 would have been motivated to scan the files as quickly as possible, without compromising  
9 security.

10 It would have been obvious in this combination that because the file contains the resource  
11 fork and resource items, and the hash is taken of the file, the signature includes a number of  
12 resource items specified within the resource fork. It further would have been obvious that  
13 because the fingerprint data represented the file during comparison, and the flags of Cozza  
14 indicated the viruses found in the file, the fingerprint data would have included a flag indicating  
15 which data (viruses) was included within said fingerprint data.

16 It further would have been obvious that the checksum of the file in this combination  
17 would have been dependant upon a number of said program resource items specified beneath  
18 each node within hierarchically arranged resource data of said packed computer file; string  
19 names associated with said program resource items within said resource data of said packed  
20 computer file; and sizes of said program resource items within said resource data of said packed  
21 computer file, as Pietrek teaches that Win32 PE files are arranged in such a manner, as is seen in  
22 Pietrek Fig. 5 and Table 13.

1           Regarding claims 2, 18, 34, 50, 66, and 82, Cozza, Arnold, and Pietrek disclosed that said  
2   known computer program is one of: a Trojan computer program; and a worm computer program  
3   (See Cozza Col. 1 Lines 22-32 and Col. 7 Lines 35-39).

4           Regarding claims 3, 19, 35, 51, 67, and 83, Cozza, Arnold, and Pietrek disclosed that said  
5   resource data comparing logic is operable to compare said resource data with characteristics of a  
6   plurality of known computer programs to detect if said packed computer program contains one of  
7   said plurality of known computer programs (See Cozza Col. 7 Lines 35-40).

8           Regarding claims 5, 21, 37, 53, 69, and 85, Cozza, Arnold, and Pietrek disclosed that said  
9   program resource items used by said known computer program include one or more of: icon  
10   data; string data; dialog data; bitmap data; menu data; and language data (See Cozza Col. 2  
11   Paragraph 7).

12           Regarding claims 6-8, 22-24, 38-40, 54-56, 70-72, and 86-88, the combination of Cozza,  
13   Arnold, and Pietrek disclosed specifying a storage location for each resource item as an offset,  
14   and the size of each resource (See Pietrek Page 20 Table 13 Offsets and Page 21 Fig. 14  
15   DWORD OffsetToData).

16           Regarding claims 12, 28, 44, 60, 76, and 92, Cozza, Arnold, and Pietrek disclosed that  
17   said generated fingerprint data includes timestamp data indicative of a time of compilation of  
18   said known computer program (See Cozza Fig. 5 VOLUMECRDATE).

19           Regarding claims 14, 30, 46, 62, 78, 94, and 98, Cozza, Arnold, and Pietrek did not  
20   specifically disclose that the checksum is rotated between each item being added into said  
21   checksum, but SHA, which shifts 1 bit to the left after each operation, was a well known

Art Unit: 2131

checksum in the art at the time of invention, and as such it would have been obvious to the ordinary person skilled in the art to have used SHA as the checksum.

Regarding claims 15, 31, 47, 63, 79, and 95, Cozza, Arnold, and Pietrek disclosed decompressing the computer program upon execution (See Pietrek Page 21 PE File Base Relocations).

Regarding claims 16, 32, 48, 64, 80, and 96, see the rejection of claim 1 above.

### *Conclusion*

Claims 1-3, 5-8, 12, 14-19, 21-24, 28, 30-35, 37-40, 44, 46-51, 53-56, 60, 62-67, 69-72, 76, 78-83, 85-88, 92, 94-96, and 98 have been rejected.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew T. Henning whose telephone number is (571) 272-3790. The examiner can normally be reached on M-F 8-4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
